

HOW TO ATTACH THE RACK EARS

First of all we advice to flip the Komplex Sequencer upside down to access the bottom side. Put it on a blanket or pillow or something nice and cuddly to protect the faders and knobs on the top side.

1 You will find a few rubber feet under which screws are hidden. Depending on your serial number there is between 6 and 10 screw holes with screws. Remove these screws and keep them on the side for now.

2 Once you have removed all the screws from the bottom panel, grab the wooden cheeks and slightly (just a teeny tiny wee bit!) bend them outwards, so you can lift off the backpanel towards you. The wooden cheeks are attached the bottom panel, so the whole assembly will come off.

3 Remove the wooden cheeks from the bottom panel and screw in the rack ears in their place with the screws that came with the rack ears. Then the bottom panel goes back onto the sequencer and screwed back with the screws you kept on the side earlier.

AND IS DONE!

Screw it all back and put with your set-up
